

AUGUST 15 SET FOR BEGINNING OF OPERATION

Montana Refining Company Project to Solve Problem.

Operations were begun Monday at the new refinery of the Montana Refining Company. The plant is the first of its kind in operation and will produce 100,000 gallons of refined kerosene and 50,000 gallons of refined gas oil daily. The plant is located on the north side of the city, near the old refinery site. The new refinery is the result of a project which has been in progress for some time. The old refinery was operated by the Montana Refining Company, which was the first to produce refined kerosene in Montana. The new refinery is a complete new plant, and will produce a much higher quality of refined kerosene and gas oil than the old plant. The new refinery is expected to be in full operation by August 15th. The plant is owned and operated by the Montana Refining Company, which is a subsidiary of the Standard Oil Company. The new refinery is a very important addition to the city's industrial resources, and will help to solve the problem of refined kerosene and gas oil supply in Montana.
