

Bentonite May Be Feed for Sheep

BELLE FOURCHE, S. D.— (UP)—A new use may have been found for bentonite, the volcanic clay which is found in large quantities in the Belle Fourche area.

Experiments using bentonite as a sheep feed mix look promising, according to Robert M. Jordon, associate professor of animal husbandry at State college.

Bentonite, which absorbs many times its weight of water, is used largely in steel foundry work and in oil well drilling.

Bentonite As Feed For Sheep
